

MEDICAL ALERT

The world's smallest 2-way voice speakerphone pendant communicator

Safety & Peace-of-mind are just a call away.....

Call Center

Living independently is the desire of most individuals. However there are times when living alone can mean there is nobody to assist you during an emergency. Habitec offers the ability to summon assistance at any time with a simple push of a button.

Emergencies can happen anywhere in your home and even in the yard or driveway. Habitec will allow you to communicate your message instantly and efficiently from anywhere in and around your home for you to get help fast. All this with ONE button activation. Pendant is water-resistant - so, take it in the shower with you.

Local Emergency Services

Voice coverage for typical Personal Emergency Response System

With a standard personal emergency response system, you are limited by the location of the base station because you have to be within "range" to hear the call center talking to you. If you are too far from the base, you cannot hear, or more importantly, tell them what the emergency is!

Habitec: Full house coverage

Habitec's base station plugs into any standard telephone jack and will allow you to communicate your message instantly and efficiently from within many hundreds of feet of your base station. The system should cover your average American home and into the front, back and side yards.

MEDICAL ALERT

Can I wear the medical pendant into the shower?
Yes, the pendant meets all industry standards for water resistance.

Who installs the Habitec medical alert system in my home?

Unlike most of our competition that mails the unit to you a Habitec technician will come out to your home to install, test, and train you on your new medical alert unit.

Who is monitoring the medical emergency alarm signals?

Habitec's company owned and operated central station monitors all emergency medical alarms. We do not work with third party dispatch companies.

What happens if I lose power?

When the power fails, the medical alert system automatically switches over to a rechargeable battery which will provide over 24 hours of back-up protection.

Will the medical pendant work in my yard?

In most situations the signal strength will reach your yard. While we are out installing the unit we can test different locations around your home for signal strength.

How often should I test my medical alert system?

We test the communication of your system daily. We suggest that you should also test the system monthly so that you are comfortable with using it.

How will I learn to use the medical alert system?

While we are out installing the system we will instruct you on how to use the system.

Our Central Station is standing by 24 hours a day 7 days a week
